Brand Ethos

We aspire to be the very best in what we do: delivering the finest steak and freshest lobster to your plate. We believe simplicity is key and let the food speak for itself.

With freshly caught lobster and steak from County Antrim in Northern Ireland, we understand the importance of provenance and quality.

Celebrating the finest from land and sea, our signature cuts and lobsters can be enjoyed in their purest form straight from the charcoal grill, in a baked brioche roll or through other exquisite combinations.

Method	Description
Build	Cocktail-making technique which involves adding ingredients into a serving glass or a Boston tin in a specific order to mix ingredients without dilution or chilling.
Throw	Cocktail-making technique which chills and mixes a drink at the same time. It is designed to aerate a drink without diluting it too much.
Dry shake	Dry shake means shaking ingredients in a shaker with no ice to avoid dilution and create a different mixture between the ingredients. Very often this technique is used in drinks containing egg white, where whipping the ingredient before shaking creates a foam which will give another texture to the drink.
Wet shake	Wet shake means shaking ingredients in a shaker with ice. It is used to mix the drink with a certain level of dilution and is a key method for shaking the drinks with citrus, fruit, creams and liqueurs.
Hard shake	Hard shake is like wet shake, but it is intended to drive the ice inside around the shaker rather than just back and forth. This technique creates ice shards that will smoothen up the drink.
Stir	Stirring is much gentler mixing technique than shaking. Its goal is to combine the ingredients with just a right level of dilution to make it more palatable.
Fine strain	Fine strain (Double strain) is often used when a drink is mixed with small, solid ingredients that are not desired in the final drink. Drink would go through 2 strainers before reaching the glass: Hawthorne and Fine mesh.
Strain	Straining technique is used to remove various items before serving. It is often used to avoid ice reaching the final drink after shaking or to remove fruits, leaves and any other bits we do not want in the drink.
Muddle	Muddling is a technique used when we require to release the flavours of fresh products. Ingredients such as fruits and herbs are pressed against the side of the glass with a muddler to release oils and juices.
Churn	To churn a drink is when the ingredients are stirred with crushed ice. Churning will ensure that the drink chills very quickly.
